Insect Damage Detection Report

Prediction Result: moderate

Suggestions: STAGE: MODERATE DAMAGE Description: Leaves show visible holes, chewing marks, or curling. Insects may be clearly visible on the plant. The infestation has started spreading and can reduce crop productivity if not controlled. Recommended Treatment: 1. Spray Neem Oil or Botanical Pesticide twice a week. 2. Apply biological control agents like Bacillus thuringiensis (Bt). 3. Remove heavily damaged leaves to stop spread. 4. Use pheromone traps to reduce pest population. 5. Spray soap water solution (10 ml liquid soap per liter water). Chemical Control (if necessary): • Use Imidacloprid or Spinosad spray as recommended by agricultural experts. Preventive Measures: • Regular field monitoring. • Crop rotation. • Avoid water stagnation around plants.
